2006 Technology Fast 500

Powering ahead

Annual list of the fastest growing companies in North America

Audit • Tax • Consulting • Financial Advisory •

2006 Deloitte Technology Fast 500

Research and Eligibility

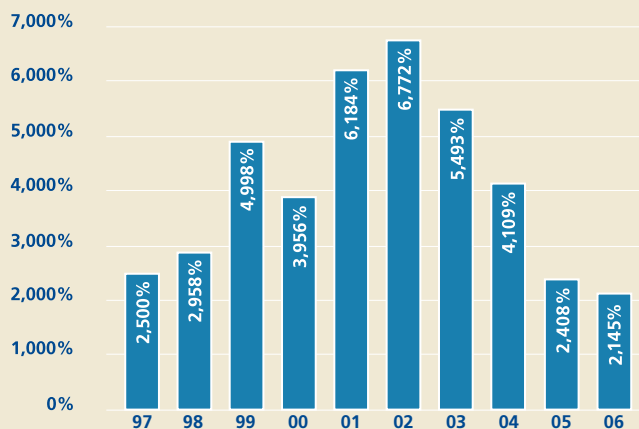

The Deloitte Technology Fast 500 is a ranking of the fastest growing technology, media, telecommunications and life sciences companies in North America based on percentage fiscal year revenue growth over five years (2001–2005).

Sources for public and private companies that make the list include public company databases, Deloitte's 16 regional Technology Fast 50 programs in North America and direct nominations.

To be eligible for the Technology Fast 500, a company must meet the following criteria:

1. Own proprietary technology or proprietary intellectual property that contributes to a significant portion of the company's operating revenues or devotes a significant proportion of operating revenues to research and development of technology. Using other companies' technology or intellectual property in a unique way does not qualify.
2. Meet minimum operating revenue requirements:
 - 2001 operating revenues must be at least \$50,000 USD or \$75,000 CD.
 - 2005 operating revenues must be at least \$5 million USD or CD.
3. Be in business a minimum of five years.
4. Be headquartered within North America.

Fast 500 Companies
Average Percentage Growth Rate

Dominating in an Increasingly Competitive Landscape

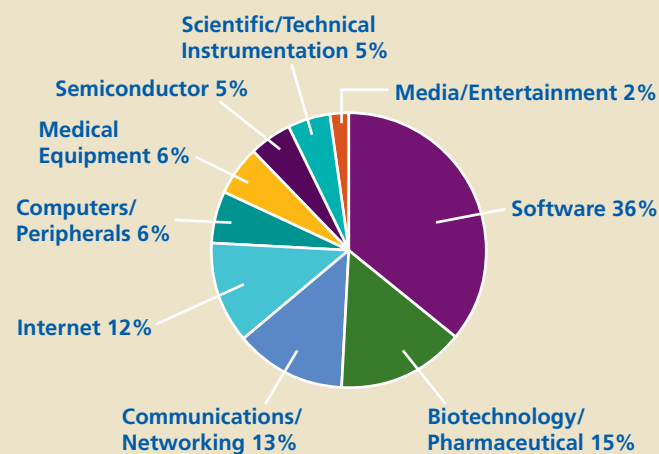

When sophisticated technology becomes the norm for business and consumers alike, touching virtually everything in 21st-century life, it takes a lot to stand out from the competition. Companies have to be nimbler, more astutely managed, and more dramatically innovative than in the past. So Occam Networks, this year's 12th annual Deloitte Technology Fast 500 top company, is certainly a standout. With a growth in revenues of almost 49,000 percent over five years, it is representative of a diverse list of companies successfully operating in a more challenging environment. Come up with an original idea, construct a sound business model, and find the right mix of people dedicated to making it a winner — that's how you join the Fast 500.

Our Top Five companies experienced an average revenue growth rate of 38,107 percent over five years. Not surprisingly, given the more competitive landscape, average revenue growth for our Fast 500 companies as a whole declined from last year to 2,145 percent.

The Top Five

Occam Networks Inc. is this year's leader. The Santa Barbara, Calif.-based company is a provider of broadband access products designed to enable telecom service providers to offer bundled voice, video, and data over copper and fiber optic networks. Its revenues in 2005 were \$39,238,000, an increase of 48,948 percent from 2001 revenues of \$80,000.

Fast 500 Companies
by Industry Segment

Westport Innovations Inc., a Vancouver, British Columbia-based supplier of alternative fuel power technologies, came in second. The company posted revenues of \$34,436,000 in 2005, up 42,945 percent from 2001 revenues of \$80,000.

Litle & Co. of Lowell, Mass., in third-place, provides payment processing and management services to direct commerce merchants. The company's 2005 revenues of \$34,796,000 reflect a 33,683 percent increase from its 2001 revenues of \$103,000.

Airborne Entertainment Inc. of Montreal, Quebec, came in fourth. The company develops and packages mobile content and reported revenues of \$35,768,000 in 2005. This reflects an increase of 33,328 percent from 2001 revenues of \$107,000.

NewMarket Technology Inc., based in Dallas, Texas, takes fifth place. The company works with new, innovative technologies and takes them to market. NewMarket Technology's 2005 revenues were \$50,138,000, an increase of 31,633 percent from 2001 revenues of \$158,000.

Fast Highlights: Oh Canada

On this year's list, Canadian companies are the news. Five of the Top 10 companies on the list are based in Canada, and two are in the Top Five. Last year, Canada was represented by one company in the Top 10 and none in the previous three years. Canada also has the top average percent growth for all regions — 3,876 percent. The U.S. average is 1,927 percent. Canadian companies have enjoyed a steady increase in average percent growth, from 1,597 in 2004 to 2,195 in 2005 to this year's 3,876 percent. And, Canadian companies reported higher average revenues of nearly \$72 million CD in 2005, up considerably from 2004 average revenues of \$47 million CD.

Speaking of geography, we're also seeing a shift this year from the dominance of the West in the Top 10. Occam Networks Inc. is the only West Coast-based company in the Top 10, compared to last year when the Top Four were all from California, and 2004, when the entire Top 10 group of companies was based in the West.

The West is no longer the dominant region in the larger list, either. This year, the Northeast equals the West in percentage of companies represented — 28 percent — even though it has one less company on the list (138 companies). The Southeast follows with 90 companies, or 18 percent. Canada has 56 companies, representing 11 percent, followed by the Southwest with 46 companies (9 percent), and the Midwest with 31 companies (6 percent).

Telecom rules in the top ranks this year. Four of the Top 10, including the number one company, are in communications/networking. The segment has grown the fastest compared with other industries — an average of 3,778 percent over five years, marking a dramatic increase from 2,242 percent last year. Interestingly, this segment makes up only 13 percent of the Fast 500 list. Software continues to dominate the list as a whole, with 179 companies, or 36 percent. Biotechnology/pharmaceutical follows with 76 companies, or 15 percent. Internet companies account for 12 percent. Computers/peripherals and medical equipment segments each make up 6 percent. Semiconductor and scientific/technical instrumentation each account for 5 percent, and our new category of media/entertainment follows at 2 percent of the list.

Private ownership (rather than public companies) make up more than half of this year's list. There's been a steady decline in public companies to 49 percent from 53 percent last year and 59 percent in 2004. This year, revenues of the 51 percent of privately held companies on the list grew faster on average — 2,207 percent — than publicly held companies, which had a growth rate of 2,082 percent.

This year's Fast 500 saw an increase to 13 companies that reported more than \$1 billion in 2005 revenues, up from 11 companies last year. Comcast, a Philadelphia-based media/entertainment company, was the top earner, with 2005 revenues of \$22.3 billion. This is the first year it has appeared on the Fast 500 listing and holds the Fast 500 ranking of Number 422.

A Big Return

It's not easy to keep growth rates soaring, so we recognize those who continue to stay on the fast track. This year, we note five companies that have been on the Fast 500 list for seven years: Open Solutions Inc., Research in Motion, Celgene Corporation, Cephalon Inc., and Unica Corporation. And, life sciences company Gilead Sciences, based in Foster City, Calif., has been on our list for eight years.

They aren't the only repeaters. Five of our current Top 10 winners previously have appeared on the Fast 500 listing.

The Top Five

1. Occam Networks

When it comes to providing broadband services, Occam Networks is betting on telcos. The company, founded in 1999 on the technical vision of Chief Technology Officer Mark Rumer, is focused on transforming telephone companies' last mile into a broadband access pipe, using IP and Ethernet technologies enhanced to provide telco reliability to the network.

Loop carriers have been around for decades, but Occam believes it has improved on the available technologies. Specifically, Occam is now applying IP and Ethernet protocols to enable more efficient delivery of voice, data, and video over local phone lines. Occam's technologies enable telephone companies to launch new services for new revenue streams with an innovative class of equipment. Moreover, Occam's technologies permit companies to offer the additional services without requirements for additional manpower, thereby improving the efficiency of the customers' operations.

2. Westport Innovations

With oil prices soaring and continued concerns about availability, it's no wonder an innovative young company that develops alternative fuel power technologies and high-performance, fuel-efficient internal combustion engines has become such a success.

In fact, if you live in a city like San Diego, the bus going down the street probably is running on an engine designed and sold by this Canadian start-up.

Founded in 1996, Westport Innovations was originally created around technology developed at the University of British Columbia (UBC) — using natural gas as a fuel in diesel engines to reduce emissions of nitrogen oxides, particulate matter and greenhouse gases (GHG). As CEO David Demers recalls, the university's industry liaison office matched up outside finance and marketing people with the university's tech people.

"I was the designated outsider. I didn't know anything about the technology. My background is hardware and software out of IBM. I was not an engine guy," he says. "This was all about combustion and clean engines and the need to do something about emissions from transportation. I was very intrigued by it. We didn't really have a business at that point — all we had were some compelling research results. But I felt that we'd quickly discover what the business was and bring in the partners to help us. I was right. We grew fast."

One reason Occam Networks has had such success — growing from \$80,000 in revenues in 2001 to more than \$39 million in 2005 — is the unique blend of people who work there. They come from a mix of traditional telecom and IP/Ethernet backgrounds as well as both start ups and large enterprises, and range from new college graduates to seasoned talent. Initially, the team consisted of just a couple of employees. Today, there are more than 100 employees. Occam's customer base has grown to 172 customers at the end of the June 2006 quarter.

Occam has focused on independent telephone companies serving regions and communities in North America, and they have proven to be a good customer base because they're early adopters of technology. As Occam looks to the future, it is hoping to expand its customer base to include larger telecommunications companies directly and through strategic relationships.

After a couple of years of developing the technology into something concrete to demonstrate — high performance natural gas engines using a concept called high-pressure direct injection, or HPDI — Demers and his colleagues decided to partner with other companies to get their product to market. Their first partner was Cummins Inc. of Columbus, Ind., and together they formed Cummins Westport Inc.

Since then, they've shipped about 12,500 engines, mostly for buses and refuse vehicles, around the world. Their biggest customers are fleets in California, but they also support fleets in Beijing and Paris. That's grown revenues from \$80,000 in 2001 to \$34.4 million in 2005

And, there's more to come down the road. "Our next product line is heavy duty highway trucks," says Demers. "They'll be quieter and much cleaner, but what's driving the interest is that the fuel is cheaper. It's all about environmental performance and the need to diversify away from oil, since it's so expensive. That's what's galvanized things for us in the last 12 months. The conditions are perfect for what we're trying to do. Costs have been going down as we mature, so our margins are good. We've got happy customers and interest growing around the world."

3. Litle & Co.

Thomas J. "Tom" Litle,
President and CEO

Headquarters: Lowell, MA

www.little.com

Revenue Growth Over
Five Years: 33,683%

If ever there was a father-son partnership that demonstrated the benefits of a right brain/left brain combination, it would be the Litles. Thomas J. "Tim" Litle, Litle & Co.'s founder and chairman, is Harvard Business School and Cal Tech. His son, Thomas J. "Tom" Litle, president and CEO, is Berkeley and Rhode Island School of Design.

Together this duo has created a merchant payment processing company that has grown from \$103,000 in revenues in 2001 to almost \$35 million in 2005. It's actually the third company they've collaborated on, with the right-brained Tom Litle joining his dad to grow the organization and sales force so that the left-brain Tim Litle could focus on the technology of their products.

Tom Litle explains that their customers are merchants who need help with the processing and dealing with Visa and Mastercard, but he's quick to point out that while more than half are Internet marketers, Litle & Co. stays away from the gambling and pornography industries.

The advantage that Litle & Co. has, says Litle, is that they provide a holistic service to their customers. "Our technology is a strategic differentiator," he says.

"Eighteen months ago we moved beyond developing core features that the competition had to develop a more sophisticated platform. But, we also come to these customers with an understanding of Visa and Mastercard regulations, an understanding of the technology, and an ability to manage their risk."

Another advantage, he says, is low turnover among their 50 employees. That gives them deep domain expertise. "If we have turnover, then we can't offer our depth of expertise," he says.

Working with his dad, he adds, is great. "It's defined our relationship. We're both workaholics." But, he notes, that this time he comes to the partnership with more experience and confidence.

"We're hitting our stride right now," he says. "We're having fun and our customers like what we're doing. We have no outside investors, so we can grow at a pace that allows us to maintain our culture and the level of service our customers want."

4. Airborne Entertainment

Garner Bornstein
CEO, Co-Founder

Andy Nulman
President, CMO, Co-Founder

Headquarters:
Montreal, QC, Canada

www.airborne-e.com

Revenue Growth Over
Five Years: 33,328%

What's on your cell phone? Games? Wallpaper? Ring tones? Hockey scores? It could be that some of those fun add-ons have been created by Montreal-based Airborne Entertainment, a mobile content producer.

Founded in 2000 by the team of Andy Nulman, formerly the CEO of Montreal's Just for Laughs comedy festival, and Garner Bornstein, who previously had formed an ISP and web development company, Airborne Entertainment grew out of an earlier idea: funniest.com.

"We wanted to start a humor portal on the web," says Nulman, "but there was no business model. Wireless seemed to show promise with a 'joke of the day' concept, but it ended up morphing into a mobile media company. We work with a lot of well-known brands and take them, plus the content we develop ourselves, across multiple product lines such as ring tones, games, and video. We've expanded beyond being a content provider to creating programs and promotions for advertisers on cell phones."

The company works with brands as diverse as Mary-Kate and Ashley Olsen and the NHL on all possible mobile platforms. But, Bornstein points out, the most important aspect to their success is that they've developed relationships with every major wireless carrier in North America and an increasing number of international service providers.

"You can't talk to these brands unless you can reach all customers," he says.

As a result, the company has increased its revenues from \$107,000 in 2001 to almost \$36 million in 2005 — and, in June 2005, it was acquired by Cybird Co. of Japan for \$110 million CD. But, success has also created some challenges, namely keeping up with the growth by hiring well and being able to anticipate change. "This is a business that changes weekly," says Nulman. "The challenge has been to maintain the pace while not losing sight of the revenue you have to bring in, and position yourself now for what's coming in two or three years."

Says Bornstein, "We read everything, watch the web, stay in touch with pop culture, and do focus groups. We have to get good data to support the decisions we make. We're not afraid to take risks."

"The phone is the universal remote control of life," says Nulman. "We'll grow with the industry. We're the Magellans of the mobile world."

5. NewMarket Technology

Remember incubators? They were the “it” organization back when dot.coms were just coming into vogue. Well, NewMarket Technology has taken that concept and turned it on its head. Philip Verges, the company’s chairman and CEO, describes it as an asset-based systems integration firm, “but the asset aspect is that we have our own products that we package and sell, and these assets are emerging technologies.”

Yes, they’re an incubator and acquire early, development-stage companies, but, he says, “We have two magic special sauces, so to speak. One is a combination of traditional systems integration and the early marketing and selling of a new technology. The other is that we’ve also integrated the financing activity for these early technologies. We’ve collapsed the entire technology life cycle into a discrete single business.”

Verges explains that each emerging technology is packaged into a discrete subsidiary. As that subsidiary gets some initial traction, they give it its own public listing, which gives it the ability to capitalize it further and gives NewMarket an interim return on investment.

That formula has worked. NewMarket has leaped from \$158,000 in revenues in 2001 to \$50 million in 2005. Verges would like to see the company hit half a billion dollars in revenues in three years.

The company now has 1,000 employees, including members of Verges’s family, and has expanded beyond the United States to developing economic regions like China, Eastern Europe, and Latin America. “These economies are growing faster than the U.S., and there’s less competition from brand name incumbents,” he says. “And, it’s fun because you’re finding local technology entrepreneurs who have developed products and technologies specific to those regions.”

There are also more soulful benefits. “Of the 1,000 employees we have, 900 are spread across China, Latin America, and Southeast Asia,” Verges explains. “We’ve watched the lifestyles of our employees improve, and we’re seeing economic improvement. So, this isn’t just a great business opportunity, it’s very rewarding.”

About Deloitte

Deloitte refers to one or more of Deloitte Touche Tohmatsu, a Swiss Verein, its member firms and their respective subsidiaries and affiliates. Deloitte Touche Tohmatsu is an organization of member firms around the world devoted to excellence in providing professional services and advice, focused on client service through a global strategy executed locally in nearly 150 countries. With access to the deep intellectual capital of approximately 135,000 people worldwide, Deloitte delivers services in four professional areas, audit, tax, consulting and financial advisory services, and serves more than one-half of the world's largest companies, as well as large national enterprises, public institutions, locally important clients, and successful, fast-growing global growth companies. Services are not provided by the Deloitte Touche Tohmatsu Verein and, for regulatory and other reasons, certain member firms do not provide services in all four professional areas.

As a Swiss Verein (association), neither Deloitte Touche Tohmatsu nor any of its member firms has any liability for each other's acts or omissions. Each of the member firms is a separate and independent legal entity operating under the names "Deloitte", "Deloitte & Touche", "Deloitte Touche Tohmatsu" or other related names.

In the United States, Deloitte & Touche USA LLP is the U.S. member firm of Deloitte Touche Tohmatsu and services are provided by the subsidiaries of Deloitte & Touche USA LLP (Deloitte & Touche LLP, Deloitte Consulting LLP, Deloitte Financial Advisory Services LLP, Deloitte Tax LLP, and their subsidiaries), and not by Deloitte & Touche USA LLP. The subsidiaries of the U.S. member firm are among the nation's leading professional services firms, providing audit, tax, consulting, and financial advisory services through nearly 40,000 people in more than 90 cities. Known as employers of choice for innovative human resources programs, they are dedicated to helping their clients and their people excel. For more information, please visit the U.S. member firm's Web site at www.deloitte.com
