Foreword

Tolga Yaveroğlu

Partner,
Deloitte Turkey
Technology, Media and
Telecommunications
(TMT) Industry Leader

In 2015, we are celebrating the 10th anniversary of Deloitte Technology Fast 50 Program in Turkey. This program has enabled us to experience the progress in the Turkish technology sector for the past ten years, providing us with the opportunity to observe the journey of each of our previous winners closely.

Deloitte Technology, Media and Telecommunications practice is pleased to announce the 2015 winners of the Deloitte Technology Fast 50 program where some of the most successful and upcoming technology companies in Turkey are ranked according to their top line performance.

In addition to the list of our winners and an analysis of their growth performance, this report also presents the results of our Technology CEO Survey. With ten years of historical data, we believe that the survey results provide insightful perspectives and touch on key issues that the Turkish Technology Industry CEOs are dealing with.

The Technology Fast 50 program goes back to 1995 where it was first introduced in Silicon Valley. Today, the program is executed in over 37 regions around the world. It was launched in Turkey back in 2006 and over these last nine years we have had enormous success within the EMEA region where Turkish Fast 50 winners were also ranked number 1 among the EMEA Fast 500 companies twice, in 2009 and 2011.

In the tenth year of the program in Turkey, Cardtek Payment Processing Services* tops our list with a growth of 5515% second year in a row. Congratulations to Ms. Sarıgöllü and her team at Cardtek Payment Processing Services.

Each year we also present a special award to the fastest growing company among the Fast 50 that managed to make the shortlist three times consecutively and the “Big Star Award” to the fastest growing companies that have achieved €50.000.000 or more in revenues during fiscal year 2014. This year, our special award is sponsored by the UK Trade & Investment and I am pleased to announce that 4play is the recipient of our UK Trade & Investment Technology Special Award. 2015 “Big Star Award”, on the other hand, goes to Innova which is the only company that made it our Fast 50 list each year over the last 10 years.

I trust you will find this year’s winners inspirational as they continue to bring innovative and value added solutions to the market place. We are proud to have businesses like these being a Deloitte Technology Fast 50 winner.

We would also like to thank our partners BMD, MOBILSIAD, TBD, TBV, TESID, TTGV, TUBISAD, and YASAD for their collaboration and support in making this program a success.

Congratulations to all the winning companies.

* In 2014, the brand was named as CordisNetwork

Welcome to Deloitte Technology
Fast 50 program; local
appreciation and global
celebration of the fast-growing
technology companies in Turkey

Overview

Welcome to 2015 Deloitte Technology Fast 50 Turkey, the local appreciation of high growth technology companies and part of the global celebration of fast-growing technology companies. We are pleased to announce the winners of the Deloitte Technology Fast 50 Turkey 2015, which recognizes the 50 most dynamic and fastest growing technology companies based on their revenue performance over the last four years. The overall winner this year is Cardtek Payment Processing Services with a growth of 5515%. anttech places the second rank with the growth rate of 2126% in 2015 program, while the third winner is 724tikla.com with 1742% growth. We are excited by the performance of the winning companies.

Although the majority of the technology companies are based in İstanbul, this year, we have eight companies from Ankara, 2 from İzmir and one from Kocaeli. 60 percent of the winning companies are in software business, 16 percent in telecommunications/networking and 14 percent in internet sub-sector. These 50 technology companies, which give importance to research and development activities, achieved an average growth of 396 percent this year.

We conducted a survey with the fastest growing technology company CEOs, asking their growth strategy and future expectations. The survey also reveals CEOs personal challenges and threats that technology industry is facing.

CEOs are more pessimistic about the economy over the next 12 months this year compared to previous year. While only 37% of the CEOs believe economy will slightly or substantially grow in the next 12 months, 63% believes it will stay stable or shrink. Although CEOs are more pessimistic with regards to the economy, their confidence levels in terms of sustaining their companies' growth levels has not changed compared to previous year. Those who indicate that they are extremely or very confident is still 74% in 2015. However, a proportion of those indicating "extremely confident" has shifted to those indicating "very confident".

The percentage of CEOs foreseeing organic growth as the main source of growth in the next 12 month outlook has increased to 74% from 55% in 2014. The CEOs are much more hesitant about VC, private equity investments as well as merger with a strategic partner options this year.

Having sound business strategies and high quality employees are still seen as the top two factors to success among the Fast 50 companies in the technology sector. Developing leaders and delegating responsibility is indicated as a more significant topic than ever on the list of personal challenges for the CEOs. In addition, this year managing expectations of the board, investors, etc. has become an important challenge compared to the past three years.

The impressive success of Turkish companies excites us and we are honored to have them in our Deloitte Technology Fast 50 program. Congratulations to our 2015 winners, and we wish to see their achievements continue in the future through creating powerful connections.

Technology Fast 50 Turkey Program

The program celebrates Turkey's fastest-growing high-technology companies. The awards identify the trends that are shaping the technology, media and telecommunications sectors today. Based on revenue growth percentage over a five year period, the program includes companies from all related industry sub-sectors:

- Software
- Telecommunications/networking
- Internet
- Computer/peripherals
- Media/entertainment

To be eligible for Deloitte Technology Fast 50 Program, companies must meet the following criteria:

- to be a technology company which:
 - develops proprietary technology that contributes to a significant portion of the company's operating revenues
 - manufactures a technology-related product
 - devotes a significant effort to research and development about technology

Deloitte Technology Fast 50 is a program that recognizes fast growing technology companies

- to be in business for a minimum of four years
- whose parent company must be Turkish owned and headquartered in Turkey
- whose operating revenues must be at least 50,000 Euros for 2011 and 800,000 Euros in 2014.

Deloitte Technology Fast 50 Program is part of Deloitte's global Fast 500 program which runs simultaneously in countries such as USA, Canada, United Kingdom, France, Norway, Sweden, The Netherlands, Germany, Central Europe, Israel, South Africa, China, Australia, Hong Kong, India, Japan, Korea, Malaysia, New Zealand, Singapore, Taiwan, Thailand, South Korea and Finland.

The benefits of participating at Technology Fast 50 program

Technology Fast 50 winners receive exposure and recognition upon release of the rankings from both the media and business communities. The benefits are significant:

- Networking opportunity with other fast-growth Turkish technology companies and business organizations at our awards ceremony
- Networking opportunity with other fast-growth technology companies and business organizations from around the world through Deloitte Technology Fast 500 EMEA Program.
- Access to leading edge industry research and commentary
- Recognition from the business and financial communities
- Benchmarking opportunity with similar companies
- Increased attention from the business and investment communities
- Media coverage

Technology Fast 50 Turkey 2015 Sponsor

UK Trade & Investment (UKTI) is a UK Government department working with businesses based in the United Kingdom to assist their success in international markets, and with overseas investors looking to the UK as an investment destination. To accomplish this aim UKTI employs around 2,400 staff and advisers, based in its headquarters in London and Glasgow in Scotland and also in British Embassies, High Commissions, Consulates and trade offices in overseas countries and regional offices in the nine English regions.

For exporters, who are planning to export globally from UK, UKTI Trade Teams create links to the vital support that companies need from local chambers, banks, lawyers, accountants and consultants. The UKTI export strategy identifying new exporters, helping existing exporters to grow and export more and targeting export-oriented foreign direct investment that fill gaps in the UK supply chain.

UKTI Inward Investment Teams, both in the UK and in the more than 100 markets worldwide, identify, encourage and support companies to invest in the UK as the ideal place to export to the rest of the world, particularly as a gateway to Europe. These dedicated teams help investors find office or factory space; advise on employee recruitment; help with securing visas and connect companies with relevant business networks. Once companies are established in the UK our Strategic Relationship Management team ensures their investment is a success and helps overcome any challenges they may have. Some of the UKTI inward investment services include introductions to the right people, advice and support on setting up in the UK, in-depth reports tailored to a business's needs, location analysis and advice on taxes, grants and incentives in the UK.

Technology Fast 50 Turkey 2015 Partners

The IT Journalists Association was established on February 20, 1998 in Turkey by journalists focusing on Information Technologies (IT). The Association operates with the objective of "Contributing to Turkey's transformation in becoming an information community."

The Association, with the contributions of non-governmental organizations (NGOs) operating in IT sector, carries out projects in order to convince publications that IT journalism is an integral specialty.

The Association organizes seminars, trainings and workshops for its members, in order to improve active news reporters' professional knowledge about IT covering various technologies that require certain specialties. Among its field of activities are to represent the profession of journalism in the highest level; to respond to any conduct that may harm the profession, the journalists and the members of the association as well as to cooperate with other media NGO's and media organizations if and when required.

The Association has over 140 members actively working at newspapers, magazines, television, internet and similar media outlets.

Established in 2009 with 24 members and comprising the representatives of the value-added mobile services sector, MOBİLSİAD (Mobile Service Provider Businessmen's Association) was founded to develop solidarity and cooperation between mobile service providers who offer value-added products, services and technologies over a "mobile technology platform" in communication, IT and media sectors.

MOBİLSİAD aims to increase the service quality and efficiency of the sector, setting sector-specific codes of conduct and making them functional among members, thus enabling the sector to operate under conditions of competition, looking for solutions to eliminate the problems experienced at national and international levels in line with the common interests of the sector companies. The Association facilitates globalization and competition of the sector players in foreign markets by strengthening the perception of the industry in national and international markets, and developing relations with regulatory public bodies and operators to ensure sectoral growth. To this end, MOBİLSİAD carries out several projects to notify and guide people, and acts as a non-governmental organization with the goals of raising the awareness of leading sector players and end users.

Informatics Associations of Turkey (IAT) has been established in 1971 and currently have reached to more than ten thousand members. IAT which is the oldest ICT association, is also the only institution in Turkey, which intends to embrace all information systems professionals as well as those other professionals who benefit from and associate themselves with information systems in any manner when performing their respective professions. The principal goal of IAT is to help the advancement of theory and practice of computer science and related sciences and technologies in Turkey and to promote widespread utilization of information systems in the country in order to reach to the ideals of information society.

Aiming at “a Turkey that is transformed to information society”, TBV, continuously works for accelerating the process of transforming Turkey into an information society. TBV also continues informing and making all the sections of the public conscious for disseminating the ICT culture to everyone, for increasing the computer literacy, and for providing the necessary infrastructure for information to be freely moved and shared. It is also aimed that the share of ICT investments in the general economy will reach the average EU member countries’ and needed information and communication technologies support will be provided for restructuring the government.

Working for promoting usage of international quality standards and software development methodologies and tools along software producing companies, TBV also supports the establishment of techno parks in order to encourage R&D activities in the ICT sector besides creating models for academy-industry cooperation.

Supporting R&D and technological innovation projects of the private sector in Turkey since 1991, TTGV (Technology Development Foundation of Turkey) is a successful example that Turkey introduced in Europe; an innovative and dynamic intermediary mentioned in EU Lisbon Communiqué as an organization required to reach public R&D support to private sector. TTGV provides long-term credit that is repaid by the companies and that requires compulsory contribution of the companies to all costs incurred in the project. By this way, the public funds are directed to R&D projects more effectively through the "multiplier effect" of the revolving fund.

YASAD (Yazılım Sanayicileri Derneği or Software Industrialists Association) is a non-governmental organization representing the software sector in Turkey. It comprises most of the local software producers, including the leading ones.

The association endeavors to help the Turkish software sector attain a world-class development level. Its mission is to place Turkey in the list of major global players who export software and related high value-added technological products, and continuously improve its position, converting the sector into one of the driving forces of the Turkish economy.

YASAD undertakes activities to create public awareness regarding the strategic importance of the software sector for Turkey, stressing its potential in exports with high value added, role in national security, economic growth, welfare and reduction of unemployment rates, and explaining the capabilities of the national software sector.

İlham Öney

CEO, Biotekno
Deloitte Technology Fast 50 Turkey
2009 Winner

In what ways did Deloitte Technology Fast 50 program contribute to your company? What kind of developments have occurred in your company since you became the winner of the Fast 50 program?

Deloitte is a respected entity in the B2B market. Its path and mission highly overlaps with Biotekno's path and mission. With its young and dynamic team, Biotekno is a success-oriented company. Biotekno places its goal of achieving success above all other goals. It provides companies with value-added digital services. Since 2009 we have utilized this award as an important element of prestige. We were already aware of the business we were doing and our success until 2009. However, the day we were awarded, we were able to scale. I think we were the first Turkish company to win EMEA Fast 500 with an amazing growth rate of 42417%. When we first heard the news it felt like a victory. After that we got a lot of investment offers as well as interview offers. But our first move was to stop and to assess ourselves, our achievements and future plans. We have worked on a five-year business plan for 3 months. We of course review our business plan every year. However, we mainly proceed in line with each year's plan and we continue to provide value-added digital services to companies.

Where do you see your company in the coming years, what are your goals?

We branched out from 2 lines of businesses to 3 lines of businesses in the past years. Our first branch was messaging which was the first thing we started working on when we founded our company. There are not many things left in this field, but we are still trying to improve our services and customer satisfaction levels. Our second line of business is electronic distribution. In that field our aim is to grow vertically and develop new services for chain stores. We are developing services in order to make sales and collections of future products such as prepaid PIN cards available around the 30 national and local chain stores we work with. Our third line of business which we have invested in is intelligent communication channels. Currently we have the best PTT (Push to talk) service (application) in the world. The PTT service (application) we developed for Vodafone is being used by companies in different scales throughout Turkey. Push to talk is an application compatible with Android systems and it works in line with the needs of businesses. In addition we have a service called "tour tracking" (Tur Takip) which makes it available to prepare reports, track and control tours in digital environment. Mobil Form is another application we developed which allows access to hard copy forms through smart phones and tablets after being configured to a computer once. This brings lots of benefits such as paper saving, protection of the environment and reducing staff costs. Right now we are working on a product (application) called "BizBize" which allows safe communication within an organization. We have high expectations of this product. We are aiming to make a difference with our world class application which is similar to "Whatsapp".

- Automated ad-buying platform Rocket Fuel has acquired X+1, an ad-tech firm offering data-management capabilities and an ad-buying tool of its own

Ayşe Nil Sarıgöllü
CEO, CordisNetwork
Deloitte Technology Fast 50 Turkey
2014 Winner

In what ways did Deloitte Technology Fast 50 program contribute to your company? What kind of developments have occurred in your company since you became the winner of the Fast 50 program?

CordisNetwork, one of our group companies, grew by 4192% for the past five years and ranked first in Deloitte Technology Fast 50 2014 Program, which determines the 50 fastest growing technology companies. In the past years many of our group companies have been a Deloitte Technology Fast 50 winner. Fast 50 Program have contributed to increasing our brand awareness and development of new business cooperations.

Where do you see your company in the coming years, what are your goals?

Our goal as Cardtek is to maintain our leading position being the payment systems solution provider for banking and finance, public, telecommunications, retail and transportation sectors in the Turkish market. We aim to increase our business volume in the international arena and expand our innovative solutions particularly in the selected strategic markets. We focus on experts in line with Republic of Turkey's 100th year anniversary goal of being amongst the world's 10 largest economies. In the next 3 years, we plan to raise the share of exports in the revenue to 70% and in 5 years we aim to be listed in NASDAQ, the global technology stock market. Apart from Turkey, we have offices in New York, Chicago, Canada, Dubai and Baku. In 2016 we plan to establish another office in Silicon Valley and our growth will continue globally. To execute this goal, we will strengthen our partner network, operate with new offices and staff in selected markets and participate in significant sectoral trade fairs and events.

How do you assess the potential of entrepreneurs in the IT sector in Turkey?

In the previous years the university graduates from IT related departments were looking for opportunities abroad due to lack of employment potential in Turkey. In the last few years the employment opportunities in the IT sector in Turkey have risen. What contributed most to this is the young entrepreneurs who tapped the business opportunities 15 – 20 years ago and established their companies which were able to gain both national and international recognition. Last year, the IT sector in Turkey has reached a size of 30 billion dollars.

What would your advice be to new entrepreneurs who have recently started their journey in the IT sector?

Young entrepreneurs should try to make a difference by developing new IT solutions that have never been developed before in their related fields. They should understand the necessities, the market potential and opportunities and develop projects accordingly. They should always monitor the global market and the emerging technologies very closely. Marketing is also a very important factor in achieving success. They should carry out maximum amount of marketing activities with minimum amount of budget. Entrepreneurs today are very lucky in that regard because of the emerging social media channels enable communication with their consumers without having to pay barely any costs.

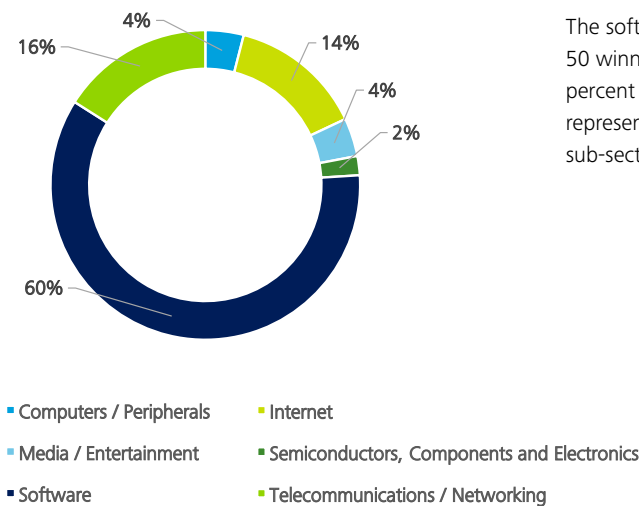

Fast Facts

Fast 50 Winners Geographical Distribution

This year as in previous years technology companies that are based in İstanbul continue to dominate the list, whereas 8 of the winners are from Ankara, 2 from İzmir and another winner is from Kocaeli.

Fast 50 Industry Segmentation

The software companies take the lead among the Fast 50 winner companies as in previous years with 60 percent share. Telecommunications/network companies’ represent 16 percent while the share of internet sub-sector remains at a percentage of 14.

Research and Development

The majority of the companies (17) spend €1M or more on research and development representing the highest share in this category over the last 4 years.

Growth Rate

As a reflection of the low economic growth period in Turkey in 2014, the growth rates of companies have also significantly decreased this year. Especially, the share of companies with 1000%+ and 500-1000% growth rates have been the lowest during the past 4 years. For the first time 50-100% growth rate category has a significant share of 16%.

Revenues

This year, the revenue breakdown of the companies that applied for the program has changed- the share of companies with €2M or less revenue has increased while the share of companies with €2M-5M revenue has decreased significantly lowering the average revenue per company. 60% of the winning companies had annual revenues of €5M or less and 28% of the companies have more than €10M in revenues.

UK Trade & Investment Technology Special Award

Revenue	€ 86.031.636

Deloitte Technology Fast 50 Turkey 2015 companies achieved four year average revenue growth of 396 percent. This year's winner is second year in a row Cardtek Payment Processing Services, with its four-year revenue growth rate of 5515 percent. The second winner is anttech with a revenue growth of 2126 percent. Our third winner is 724tikla.com with 1742 percent revenue growth.

The Winners: Top ten companies

1. Cardtek Payment Processing Services*

Cardtek Payment Processing Services, third party processing company of Cardtek, is a leading global provider of payment processing services for financial institutions, mobile payment and money transfer services for mobile network operators and issuer banks, public transportation services for the municipalities, loyalty services for the retail market. The critical role of acquiring ECR/POS transactions and routing the transactions to issuer banks and Ministry of Finance in real time, makes Cardtek Payment Processing Services a unique example worldwide.

Cardtek Payment Processing Services has received ISO, PCI DSS and MasterCard MSP certificates related to transaction processing information security, business sustainability, operation service management and disaster recovery.

In line with group's global growth strategy, Cardtek established its USA office in 2010 and started offering its high quality products and solutions in the US and Canada. The group aims to play a major role in the migration to EMV in North America which will soon be followed by mobile and digital convergence deployments. Some of the key accounts are FIS, one of the largest processing companies in the States; Everlink, one of the leading processing companies in Canada and IPS (used Cardtek's solutions for personalizing Google Wallet Cards).

BİMSA, integrates the latest technological developments into the business processes and accompanies the corporations in the digitalization journey. Founded in 1975, BİMSA is one of the foremost system integrators in Turkey.

BİMSA develops and customizes applications in the Production, Finance, Human Resources, Logistics, Management Information and Decision Support Systems fields, on multiple hardware and software platforms.

- Software as a Service (SaaS): BİMSA offers both time and cost advantage and competitive advantage for its customers while integrating the advantages of technology into their business processes. Edoksis, which provides e-invoice, e-archive and e-book integration, Pratis and HR-Web are all offered via cloud-based technologies.
- Data Center Services: BİMSA has two reserved data centers in İstanbul and Kocaeli which meet Tier 3 standards. They offer hosting and application operation services comprising reliable, continuous and redundant infrastructure components where companies can host their business-critical applications and data securely.
- Professional Services: BİMSA is among the pioneers of consultancy services in business intelligence. As the first "SAP Consultancy Support Center" of Turkey, BİMSA maintains its activities in this field since 1995. It provides application consultancy in fields like Enterprise Source Planning (ERP), Customer Relations Management (CRM), Product Life Management (PLM), Business Intelligence (BO), Enterprise Performance Management (EPM) and Supply Chain Management (SCM) for many companies from various industries.

BİMSA has ISO 22301 Business Continuity and ISO 27001 Information Security Management System certificates.

Web Address	www.buldumbuldum.com

BuldumBuldum.com is the largest gift and customized product e-commerce website in Turkey. It was founded in 2007 and grew more than %1300 times from 2009 to 2013. Since the company is in the gift business, delivery time is crucial. This is why BuldumBuldum.com developed its own website and warehouse automation technology in order to ship more than 10.000 products on the same day.

BuldumBuldum.com is the biggest customization brand in Turkey. It has its own design engine technology enabling users create their own product easily from the website. The warehouse automation technology creates unique barcodes for each customized product, allowing the company to track each product in the production steps and delivered to each customer correctly.

BuldumBuldum.com raised first round capital from Aslanoba Capital for 5 million Turkish Liras for 20% stake last year. Then BuldumBuldum.com acquired its biggest competitor HediyeDenizi.com. BuldumBuldum.com has 75 employees and 7 stores in the largest shopping malls in Turkey.

BuldumBuldum.com has its own developed technology in order to get the orders from its website and process it in the warehouse as fast as it can. Every shipment is handled by portable terminals and managed by own developed real time software automatically. The product pickups optimized by "Shortest Path Algorithms" enabling warehouse workers to pick up the products with the best and shortest ways in the warehouse in order to deliver orders in the fastest time.

Having penetrated the industry in 1984 by developing application software for personal computers, Logo is one of the largest software companies in Turkey. As the fastest growing company in the industry with more than 900 dealers and extensive network of distribution channels, Logo currently provides services for more than 1,300,000 users in more than 170,000 companies. Logo's products are customized in several languages, business practices and legislations of numerous countries in Europe, Middle East, Africa and Asia to meet the user's needs, through authorized business partners or fully authorized distributors.

In 2011, Logo acquired the entire share capital of Coretech, a prominent software company with its software as a service (SaaS) applications on the internet. In the same year, Logo acquired majority shares of WorldBI, a Business Intelligence software company. In 2013 all of the remaining shares of WorldBI were acquired by Logo. The acquisition of Netsis in September 2013, a prominent player in the industry, enhanced the competitive position of Logo in the Turkish market.

Logo, acquired the entire share capital of Logo Electronic (e-Logo) in 2014, which has a wide product and service range that enables companies to adapt the e-commerce in an agile, efficient, and practical way. Logo also acquired the entire share capital of Intermat, which is a major CRM (Customer Relationship Management) solutions provider.

Logo signed Lol with Sempa and e-Çözüm companies in the first quarter of 2015.

Simsoft was established in 2006 as a research and development company at METU Technopolis. The company has ISO-9001:2008 and CMMI Level 3 certificates and its software development processes are in compliance with global standards.

The core expertise of the company is modeling and simulation systems, as well as platform management software (mission planning, combat management, command control, data link, embedded software, and test simulators), test simulators, computer-based training and serious games.

Recently, Simsoft has restructured its operations under four main groups:

- **Simulators Group** provides software products and systems for all kind of Simulators. One of the company's successful projects was the convoy simulator delivered for the Turkish police forces. Simsoft has also developed many civil applications, used in Turkey and abroad, such as bus driving, firefighting, ambulance, construction machinery and heavy vehicles training simulators among others.
- **Defence and Aerospace Systems Group** mainly focuses on weapon, C4ISR, naval, avionic and embedded systems software development. Some of the projects developed for the major defence corporations such as ASELSAN, HAVELSAN, ROKETSAN, STM are Multi Launcher Rocket System, Air Defense Early Warning and Command Control System, Embedded GIS for Weapon Systems.
- **Visual Systems Group** has two major areas as Virtual Training Systems and Image Generators. Virtual Training Systems focus on Virtual and Augmented Reality Systems and Computer Based Training.
- **Gaming and Simulation Group** has developed gaming and simulation applications for a broad range of sectors. Game-Based Teacher Education Systems (GATES) is an innovative product to train teachers in a virtual classroom with virtual students based on artificial intelligence.

Smartiks was established in 2006 to provide effective business solutions, software development and consultancy with its expert staff by using the highest technology.

Smartiks has earned a place among the leading companies in this sector in a short time with its young and dynamic staff and essential software development tradition.

Smartiks completed many projects especially in enterprise applications, Customer Relationship Management Systems, Management Information Systems, e-Commerce and mobile applications.

Smartiks has leading young software engineers specialized in Microsoft and Oracle platforms.

Smartiks has increased its expertise in using advanced technology and developing enterprise applications with its completed and ongoing projects and partnerships. Smartiks is providing high level customer satisfaction with its solutions and achieves success.

Tel	+90 212 212 2335
Address	Yeşilce Mah. Yunus Emre Cad. No:6/3 Kağıthane, İstanbul, Turkey
Web Address	www.smartis.com.tr

Smartis Interactive, which has been established in 2000 in Istanbul, provides 360 degree Digital Brand Communication services in four fundamental subjects- design, software, social media management and technology development.

The company believes, creativity is the essence of change and if integrated with functionality, it is what companies need for their brand value and successful marketing operations.

Smartis is different at its approach to customers, which is being with the customer instead of working for the customer. Smartis does this by using analytical methods, where they measure everything and examine the consequences in CRM manner. That is why the company calls itself as Digital Engineers who bring art and numbers together.

The main principle is developing boutique services to the customers for long intervals rather than providing same product to many customers, which results in consistent revenues and long term cooperation.

Thus, Vector describe itself as a "Mobile Data Integrator".

Vector keeps investing in areas such as quality, trade name, employee satisfaction and sustainable growth to ensure its business continuity.

Deloitte Technology Fast 50 Turkey 2015 CEO Survey

Introduction

Deloitte Technology Fast 50 Turkey 2015 CEO Survey is based on the responses received from the CEOs of the fastest growing technology companies that are ranked in Technology Fast 50 Turkey 2015 Program.

The survey is an online survey that was conducted in September 2015 and completed by nearly 80 percent of the CEOs that are listed in our 2015 Technology Fast 50 Program.

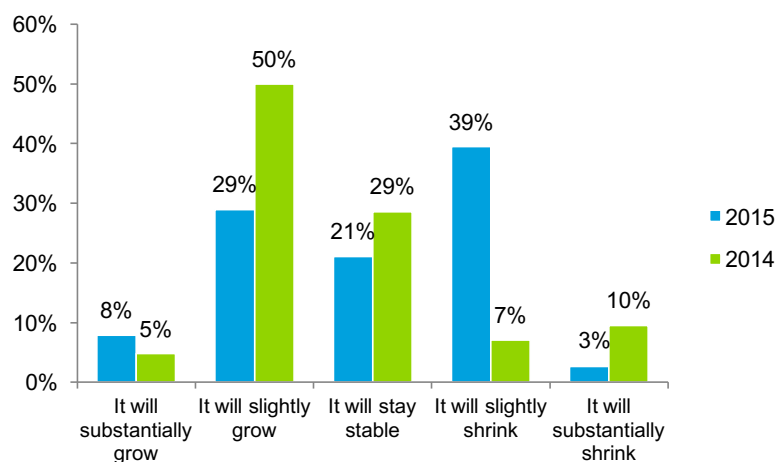

The survey aims to understand how Turkish CEOs feel about the economy as well as their companies' future, the types of operational, financial and personal challenges they face, the drivers of growth and the biggest threats in the technology sector, and markets and industries that provide opportunities for growth.

Responses to some questions are compared to previous years' survey results, in order to see how Turkish CEOs' perspectives on growth, challenges and expectations have changed over years.

We hope that the Deloitte Technology Fast 50 CEO Survey provides valuable insights into the issues that today's leading Technology CEOs cope with in driving the industry forward in 2015 and beyond.

Growth Expectations

Q1a What are your expectations with regards to the economy over the next 12 months?

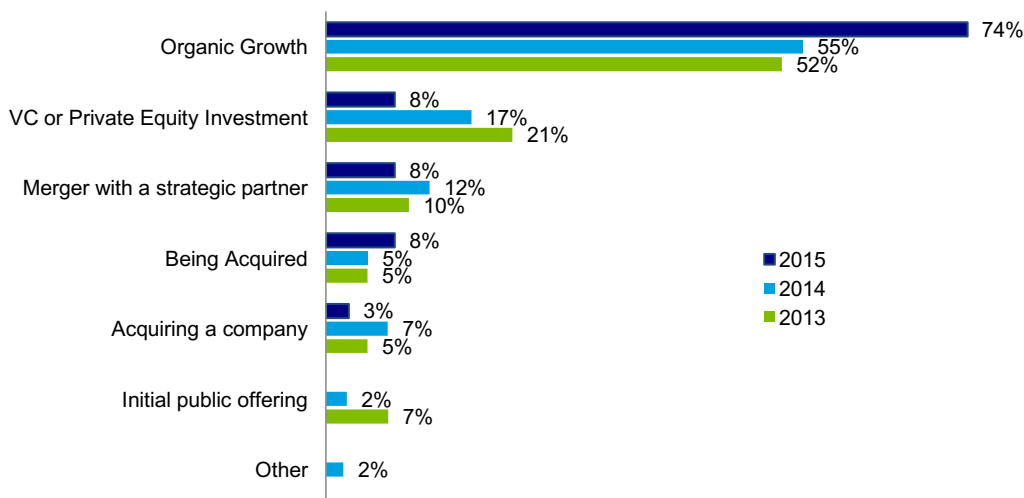

Q1b How confident are you that your company will sustain its high level of growth rate over the next 12 months?

The technology company CEOs are much more pessimistic this year. While 37% of the CEOs believe that the economy will grow in the next 12 months, almost twice as many CEOs (63%) believe it will stay stable or shrink. These percentages were 55% and 45% last year respectively. There was a decrease in the confidence levels (extremely confident + very confident) of the CEOs with regards to their companies' growth levels from 88% in 2013 to 74% in 2014. Although this year the overall share of "extremely confident" and "very confident" stayed stable at 74% as in last year, a proportion of those indicating "extremely confident" has shifted to those indicating "very confident".

Q2 What do you consider the most likely scenario for your company within the next 12 months?

The share of companies that expect "organic growth" as the main source of growth over the next 12 months has increased considerably jumping from 55% in 2014 to 74% in 2015. VC or private equity investment and merger with a strategic partner scenarios are seen as less likely in 2015 and their share have both decreased significantly to 8%. According to Deloitte's Annual Turkish M&A 2014 Report, the total deal value of M&A activities in Turkey in technology, media, telecommunications sector (internet, technology, telecommunications, media, e-commerce) was around US\$146 million in 2014 (compared to US\$833 million in 2013) (disclosed deals only) with 37 transactions (compared to 40 in 2013) (including non-disclosed deals).

Secret of Success

Q3 Which factor has contributed most to the growth of your company?

In 2015, “high quality employees” gained importance and has become the number one factor with 29%. “Having a sound business strategy” is indicated as the second important factor that contributes most to the growth of the technology companies with 26% of the CEOs agreeing with it. “Exceptional or unique product” is ranked third on the list increasing almost twice in importance from 2014 to 2015, and it is followed by “right timing in the market place”.

Q4 What is your biggest operational challenge in managing your company's rapid growth?

According to 55% of the technology company CEOs, the challenge of “finding, hiring and retaining qualified employees” has become a significant barrier for growth. “Developing a strong sales and marketing strategy” and “managing cash flow” remain amongst the top three operational challenges of technology companies in managing their companies’ rapid growth.

Q5 What is your biggest financial challenge?

Although "growing sales" again remained on top of the list as the biggest financial challenge for fast-growth technology companies, the percentage of CEOs who indicate this challenge has dropped from 50% in 2013 to 37% in 2015. In 2015, optimizing financial structure, reducing debt and raising capital have become more significant financial challenges compared to last year according to some of the respondents.

Q6 Which of the following geographic markets do you currently do business in apart from Turkey?
(Please select all that apply)

What are the top three countries that you would like to invest in the next 12 months? Please write down your first three choices.

Apart from the domestic market, Central Eastern Europe and CIS region is the main geographic focus of the technology companies currently, followed closely by Middle East and Africa with 45% and 39% share respectively. The share of respondents currently doing business in Western Europe has decreased. This year we have asked the top 3 countries that technology company CEOs plan to invest in the next 12 months. The top 3 markets are indicated as USA by 34.2%, UAE by 31.6% and UK by 26.3% of the respondents.

Q7 How much will your workforce grow in the next 12 months?

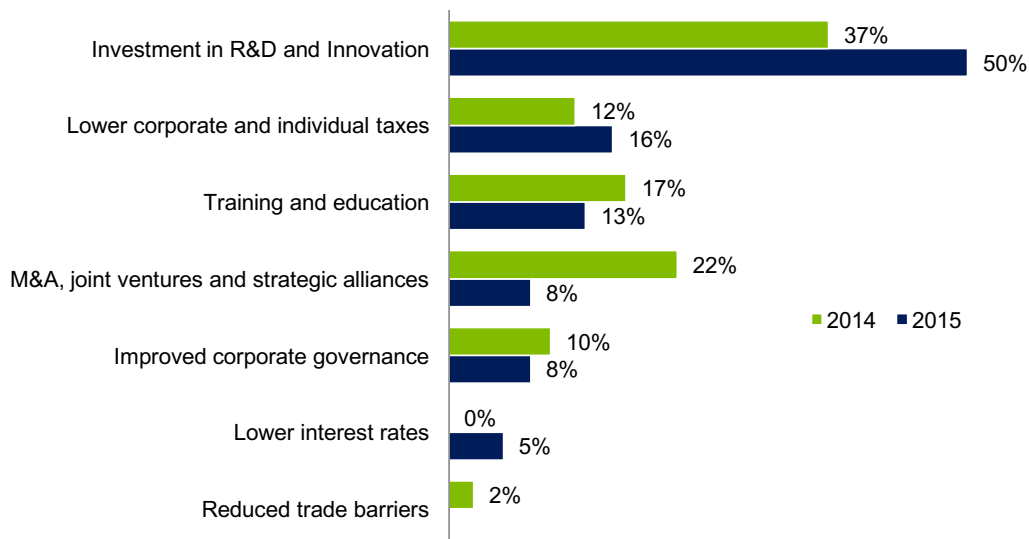

Only 5% of the CEOs believe that their workforce will grow more than 50% in the next 12 months compared to the 7.2% last year. This is most likely due to their conservative expectations with regards to economic growth in the next 12 months as well as the shift in their confidence levels with regards to sustaining business growth. 92% of the surveyed CEOs in Fast 50 Turkey Program believe that their workforce will grow at a lower rate, while 8% of the CEOs indicate that they do not expect any growth in their workforce.

Q8 What is the biggest threat to growth in the technology sector over the next 12 months?

Geopolitical instability in the region has become the biggest threat to growth this year in the technology sector. “Availability of talent” remains amongst the top 3 biggest threats to growth this year in line with CEOs’ belief that “finding, hiring and retaining qualified employees” as the biggest operational challenge in managing their companies’ rapid growth. However, the share of CEOs indicating “availability of talent” as a threat has decreased, while the percentage of CEOs who indicate geopolitical instability in the region, excessive government regulation, volatility in FX rates have increased considerably. With the Turkish Lira devaluating against the US dollar and Euro, this result is not surprising.

Q9 If you could prescribe only one thing, what would you prescribe to stimulate growth in the technology sector in the next 12 months?

“Investment in R&D and Innovation” is indicated as the key stimulator of growth in the technology sector according to 50% of the respondents, its share increasing from 2014 to 2015 significantly. In addition to investment in R&D and innovation, lower corporate and individual taxes as well as training and education are ranked amongst the top 3 factors that are seen critical to stimulate growth.

Q10 What is your most important personal challenge as a CEO?

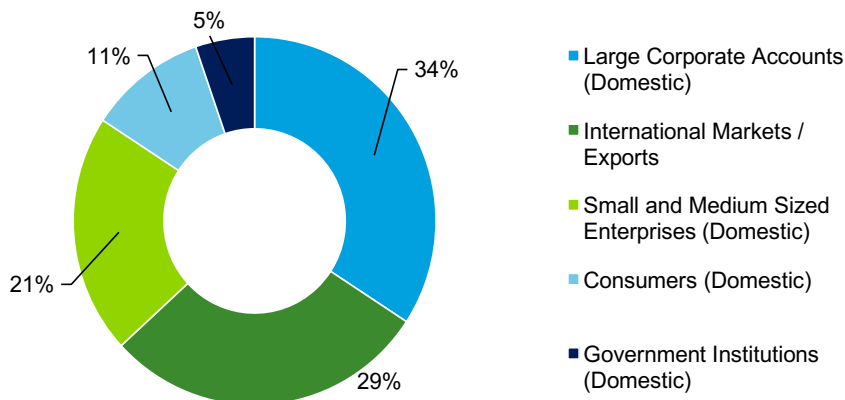

"Developing leaders and delegating responsibility" has kept its position as the most important personal challenge as a CEO for the past 3 years. Every 1 in 2 CEOs indicate "developing leaders" as the most important personal challenge. As some of the CEOs of the technology companies are founder CEOs, they are especially concerned with succession plans. CEOs are more comfortable with "achieving and sustaining profitability" while are more concerned with "managing expectations of board, investors", "managing risk and volatility" as well as "raising capital" this year.

Q11 Please select the primary customer segment that you currently target.

Q12 Please select the customer segment that you plan on primarily targeting over the next 5 years.

Majority of the technology companies indicated that domestic “Large Corporate Accounts” are their primary customer segments today followed by the small and medium sized enterprises. Together they represent more than 75% of the portfolio. However, over the next 5 years, the percentage of companies primarily focusing on international markets is expected to increase from 11% (current levels) to almost 29% as companies seek to expand their businesses globally.

**Q13 Please indicate the top three trends that will drive technology investments in the next three years.
(Please select all that apply)**

76% of the technology company CEOs indicate “digitization and mobility” as the top trend that will drive technology investments in the next three years. This trend is almost 10 points higher compared to last year. Although “better use of data through analytics” and “transparency and visibility” trends have decreased compared to previous year, they are still ranked second and third trend that will drive investments. The share of two trends “concerns about cyber security” and “increased need for productivity” have increased significantly compared to 2014. As companies collect, store more and more data in the future about their customers as well as operations, concerns about cyber security will continue to be heightened. Productivity related initiatives seem to be always important for ensuring profitable growth especially during tough economic times.

Q14 Please rank the top 3 primary sectors in terms of current business potential for your company.

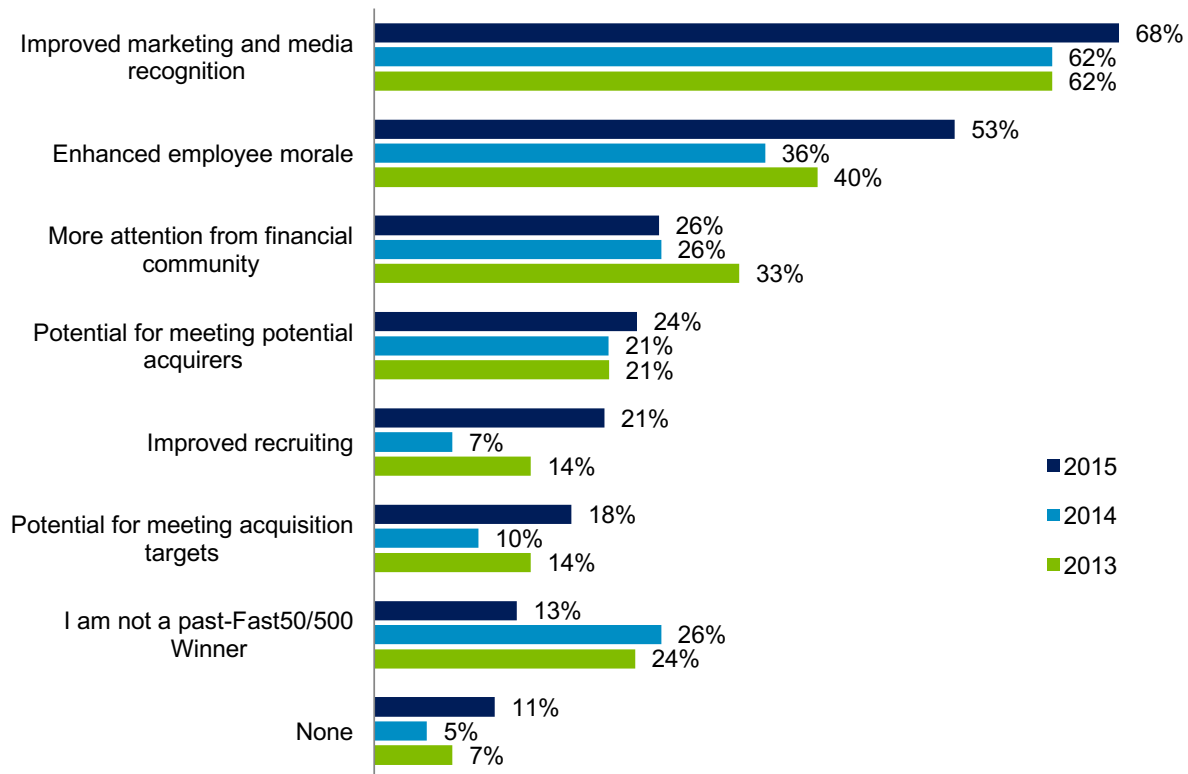

Q15 Please rank the primary sectors in terms of business potential for your company in the next five years.

“Technology, Media and Telecommunication” sector remains as the main sector which 28 out of 38 respondents think that it has potential for their current and future business plans. “Retail” takes the second place this year both in current and future business potential closely followed by “Financial Services” sector.

Q16 If you are past-Fast 50/500 winner, what benefits have you received from being selected to the Deloitte Technology Fast 50/500? (Please select all that apply)

68% of the respondents indicated that they had “improved marketing and media recognition” as a result of being a past Deloitte Technology Fast 50/500 winner. Furthermore, every 1 CEO amongst 2 indicate “enhanced employee morale” as the second most important benefit received out of the program.

Conclusion

In 2015, the technology company CEOs are much more pessimistic about the economy. While 37% of the CEOs believe that the economy will grow in the next 12 months, almost twice as many CEOs believe it will stay stable or shrink. This is also reflected on the confidence levels of the CEOs with regards to their companies' growth levels. Although the share of those feeling "extremely confident" and "very confident" with regards to their companies' growth levels stayed stable at 74% as in last year, a proportion of those selecting "extremely confident" has shifted to "very confident" category.

The share of companies that expect "organic growth" as the main source of growth over the next 12 months has increased considerably. VC or private equity investment and merger with a strategic partner scenarios, on the other hand, are seen as less likely scenarios this year.

The challenge of "finding, hiring and retaining qualified employees" has become a significant barrier for growth and is indicated by 55% of the technology company CEOs. In line with these many CEOs indicate "developing leaders and delegating responsibility" as their most important personal challenge since the past 3 years.

Over the next 5 years, the percentage of companies primarily focusing on international markets is expected to increase from 11% (current levels) to almost 29% as companies seek to expand their businesses globally.

Apart from the domestic market, Central Eastern Europe and CIS is the main geographic focus of the technology companies currently. This region is followed closely by Middle East and Africa. The top 3 countries that technology company CEOs are planning to invest in the next 12 months, on the other hand, are USA, UAE and UK.

"Technology, Media and Telecommunications" sector remains as the main sector which 28 out of 38 respondents think that it has potential for their current and future business plans. "Retail" takes the second place this year both in current and future business potential closely followed by "Financial Services" sector.

76% of the technology company CEOs indicate "digitization and mobility" as the top trend that will drive technology investments in the next three years.
